First epic and its userstories along with priority and story points

Spaces / Community Solar Credits Allocation Manager.				
COM board				
Summary Timeline Backlog Active sprints Calendar Capacity Reports List Forms Goals Components Development Code Releases Arc				
< Back COM-1				
Description				
Record, validate, and display smart-meter solar-generation data so residents can track their solar-energy output.				
Child work items				
0% Done				
Work	Priority	Story Points	Assignee	Status
☒ COM-6 Record solar generation data	High	5	Unassigned	To Do
☒ COM-7 Validate meter readings	High	5	Unassigned	To Do
☒ COM-8 View generation history	Medium	3	Unassigned	To Do
☒ COM-9 Receive low-generation alerts	Low	2	Unassigned	To Do

Second epic and its userstories along with priority and story points

Back

COM-2

Solar Credit Balance Management

Description

Calculate and manage available solar-credit balances, including balances, transaction history, and downloadable statements.

Child work items

0% Done

Work	Priority	Story Points	Assignee	Status
☒ COM-10 Calculate solar-credit balance	High	5	Unassigned	To Do
☒ COM-11 View credit balance	Medium	3	Unassigned	To Do
☒ COM-12 View credit transaction history	Medium	3	Unassigned	To Do
☒ COM-13 Download credit statement	Low	2	Unassigned	To Do

Third epic and its userstories along with priority and story points

Back

COM-3

Peer-to-Peer Credit Transfers

Description

Enable residents to safely transfer surplus solar credits to neighbours while validating balances and maintaining accurate accounts.

Child work items

0% Done

Work	Priority	Story Points	Assignee	Status
☒ COM-14 Transfer surplus solar credits	High	8	Unassigned	To Do
☒ COM-15 Validate credit transfer	High	5	Unassigned	To Do
☒ COM-16 Update account balances	Medium	3	Unassigned	To Do
☒ COM-17 Cancel pending transfer	Low	2	Unassigned	To Do

Fourth epic and its userstories along with priority and story points

Utility Billing Offset Reporting

Description
Calculate and display the reduction in utility bills gained through solar credits and provide monthly savings information.

Child work items

Work	Priority	Story Points	Assignee	Status
COM-18 Calculate billing offset	High	5	Unassigned	To Do
COM-19 View monthly billing offset	Medium	3	Unassigned	To Do
COM-20 View billing offset history	Medium	3	Unassigned	To Do
COM-21 View savings chart	Low	2	Unassigned	To Do

Linked work items

Fifth epic and its userstories along with priority and story points

Security and Administration

Description
Protect resident accounts and credit transfers while allowing administrators to manage users, audit activity, and maintain system security.

Child work items

Work	Priority	Story Points	Assignee	Status
COM-22 Secure user login	Medium	5	Unassigned	To Do
COM-23 Manage resident accounts	Medium	3	Unassigned	To Do
COM-24 View Transfer and Audit Logs	Medium	3	Unassigned	To Do
COM-25 Manage notification preference	Low	2	Unassigned	To Do

Activity

Sprint one completion

COM board

TO DO

- Create

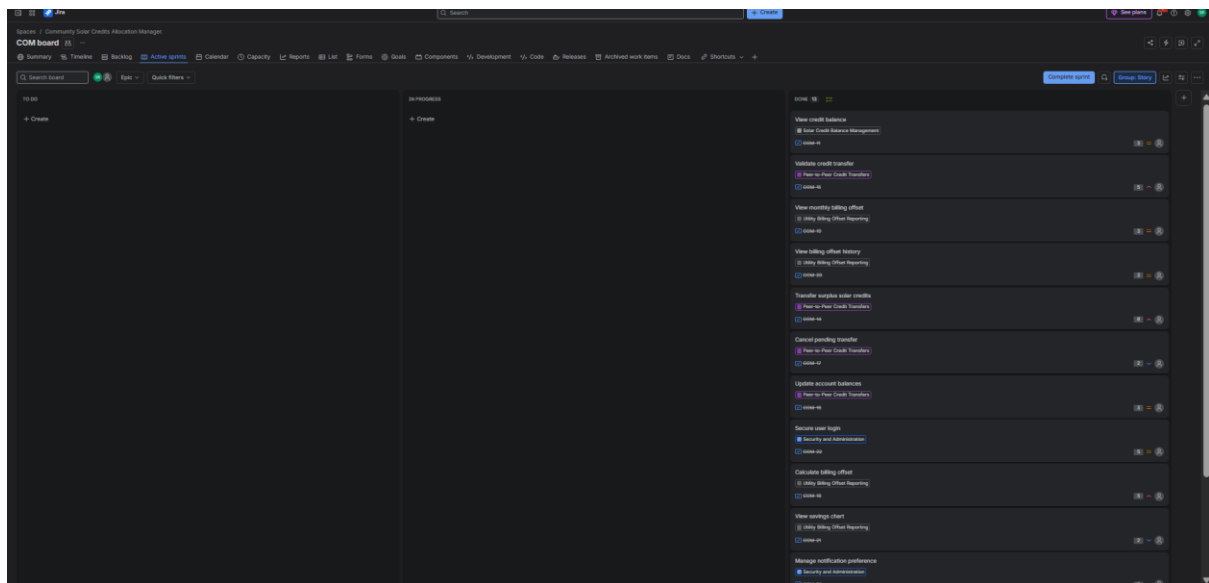

IN PROGRESS

- Create

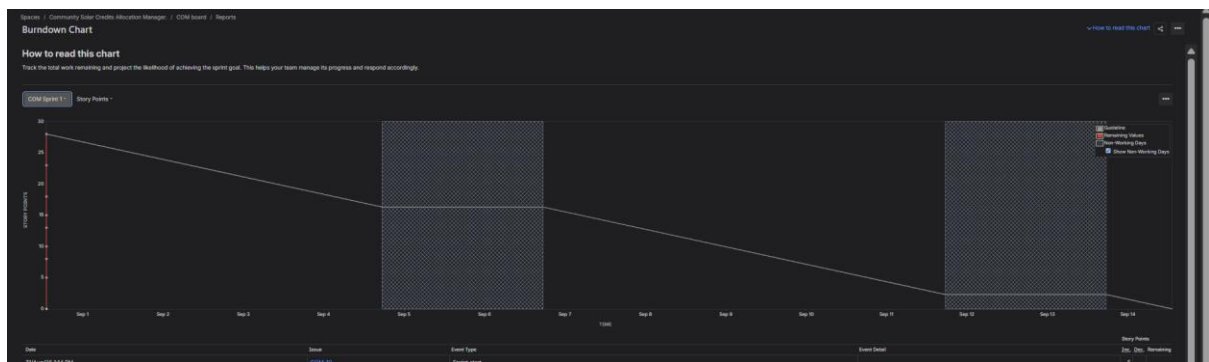

DONE

- Record solar generation data
- Validate meter readings
- Calculate solar credit balance
- View credit transaction history
- View generation history
- Download credit statement
- Receive solar-generation alerts
- View credit balance

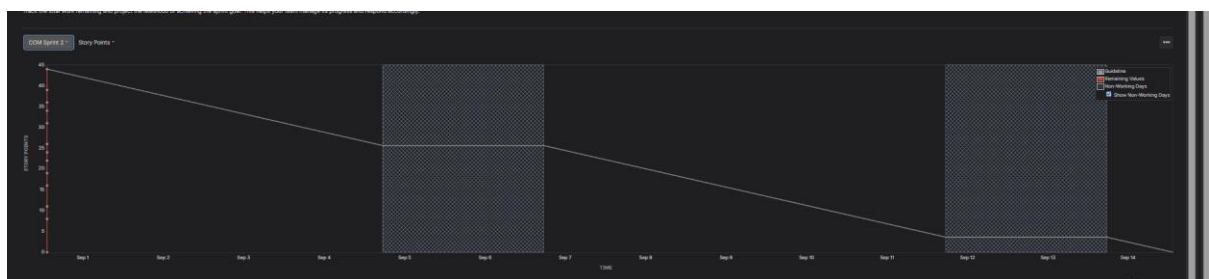

Sprint two completion

Burndown chart of first sprint

Burndown chart of second sprint

Q&A

1. Did your estimations reflect the actual effort?

The estimates represented the relative complexity and uncertainty of each user story. Simple features, such as viewing a balance, had fewer story points. More complex features, such as credit transfers and reliable smart-meter processing, had higher story points because they require validation, security, and accurate processing.

2. Was your backlog well-prioritized?

Yes. The most important stories were prioritized first: recording solar generation, viewing credit balances, transferring credits, and validating transfers. These are the core features of the application. Billing reports were medium priority because they are useful after the main credit-transfer process works.

3. How did your simulated sprint align with your plan?

Sprint 1 focused on the core solar-credit workflow. Sprint 2 completed the transfer process and added security, billing, and reliability-related work. This sequence allowed the most valuable functions to be handled first.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the remaining story points during the sprint. As stories were moved to Done, the remaining work reduced. It demonstrated that larger stories require more capacity and that story-point estimates help a team plan a realistic amount of work for each sprint.
